StockView ™

Optimized Stock Management for your Tanks

Whatever your position in the heating energy value chain, optimal stock management is no longer a question of competitive advantage, **it is now a strategic necessity.** With over 15 years of experience and more than 40 000 sensors installed in over 20 European countries, StockView™ by SilentSoft is THE out-of-the-box solution that will make your dumb tanks smarter.

Energy Distributors

Optimize your distribution by increasing **the profitability of your logistics** and simplifying your customer deliveries.

Property Managers

Optimize your procurement by **consolidating tank level readings** and **grouping your purchases** when your customers start to run low.

Industries

Optimize your production by **avoiding lubricant and diesel shortages** for your production tools and improve the management of waste oil recycling.

End Customers

Stay warm thanks to our personalized alarms which will warn you when you need to replenish your home's heating oil tank.

SilentSoft
SMART MONITORING

How does it work?

Our technicians Network

We maintain **a network of certified technicians** with over 15 years of experience who adapt the SilentSoft solution to the configuration of your heating oil, diesel, lubricant and LPG tanks. They optimize the installation and maintenance of SilentSoft's telemetry equipment.

Measurements & Communications

We deploy the latest generation of sensors to measure product levels several times per day. The **Energy Logger™**, SilentSoft's telemetry concentrator **equipped with a SIM card and a mobile subscription**, transmits these readings to our secure servers on a regular basis.

SilentSoft offers a **turnkey solution**: simply give us the locations of your tanks and we'll take care of everything!

Data Processing

After each installation, we compare the precision of our sensors with a manual measurement and perform any necessary calibration. This guarantees readings with Swiss precision! Our servers manage hundreds of thousands of measurements per day and **automatically calculate the amount of product remaining** in your tanks.

MySilentSoft®

Our new online portal MySilentSoft® allows you to analyze your tank levels, consumption history and equipment battery levels. Its map gives you a geographic representation of your stock and only a few clicks are needed to configure your alarms (volume thresholds, fillings, interventions, etc.).

Our Customer Service

Our customer service team are **project managers** who oversee your installation campaigns, monitor your telemetry park, follow maintenance interventions and **answer any questions you may have.**

For more information and advice on our solutions, contact us or visit our website, **we are at your service!**
